DETAILED ACTION

Response to Arguments

1. The applicant argued that Vathulya et al. is silent with respect to a storage capacitor comprising at least one first column shaped electrode including a stack of metal parts spaced at intervals from one another, and contact elements connecting respective pairs of the metal parts, and at least one second column shaped electrode including a stack of metal parts spaced at intervals from one another, and contact elements connecting respective pairs of the metal parts. The examiner finds this argument persuasive. Therefore, the examiner made decision to allow this limitation over the prior of record.

Allowable Subject Matter

2. Claims 1-20 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to claims 1 and 13, the prior art alone or in combination does not teach the limitation of a storage capacitor comprising at least one first column shaped electrode including a stack of metal parts spaced at intervals from one another, and contact elements connecting respective pairs of the metal parts, and at least one second column shaped electrode including a stack of metal parts spaced at intervals from one another, and contact elements connecting respective pairs of the metal parts.

Claims 2-12 and 14-15 variously depend of 1 and 13, they are allowed for the same reason.

Claims 16-20 were allowed in previous office action.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation Relevant of Prior Art

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - a. Nishimura et al. (US 5,978,206) disclose stacked-fringe integrated circuit capacitor.
 - b. Ng et al. (US 5,583,359) disclose capacitor structure for an integrated circuit.
